

sociology

What is Sociology?

- Sociology is the systematic study of social behavior and human groups.
- It deals with families, gangs, business firms, computer networks, political parties, schools, religions, and labor unions. It concerns love, poverty, conformity, technology, discrimination, illness, alienation, overpopulation, and community.
- According to Ward “Sociology is science of society”.
- Max Weber has viewed sociology as “Science which attempts imperative understanding of social actions”.

Sociology Subject Matter:

- Sociologists investigate the structure of groups, organizations, and societies, and how people interact within these contexts.
- All human behavior is social so the subject matter of sociology ranges from the intimate family to the hostile mob; from organized crime to religious cults; from the divisions of race, gender and social class to the shared beliefs of a common culture; and from the sociology of work to the sociology of sports. The Study of Social
Relationship

The Study of human
behavior in groups

The study of Social
Actions

What is Society?

- Society is a system of usages and procedures of authority and mutual aid, as well as many groupings and divisions of controls of human behavior and liberties. This ever-changing, complex system we call society. It is the web of social relationships.
- A group of people with common territory, interaction, and culture.

Types Of Society

Hunter-gatherer Society

Pastoral Society

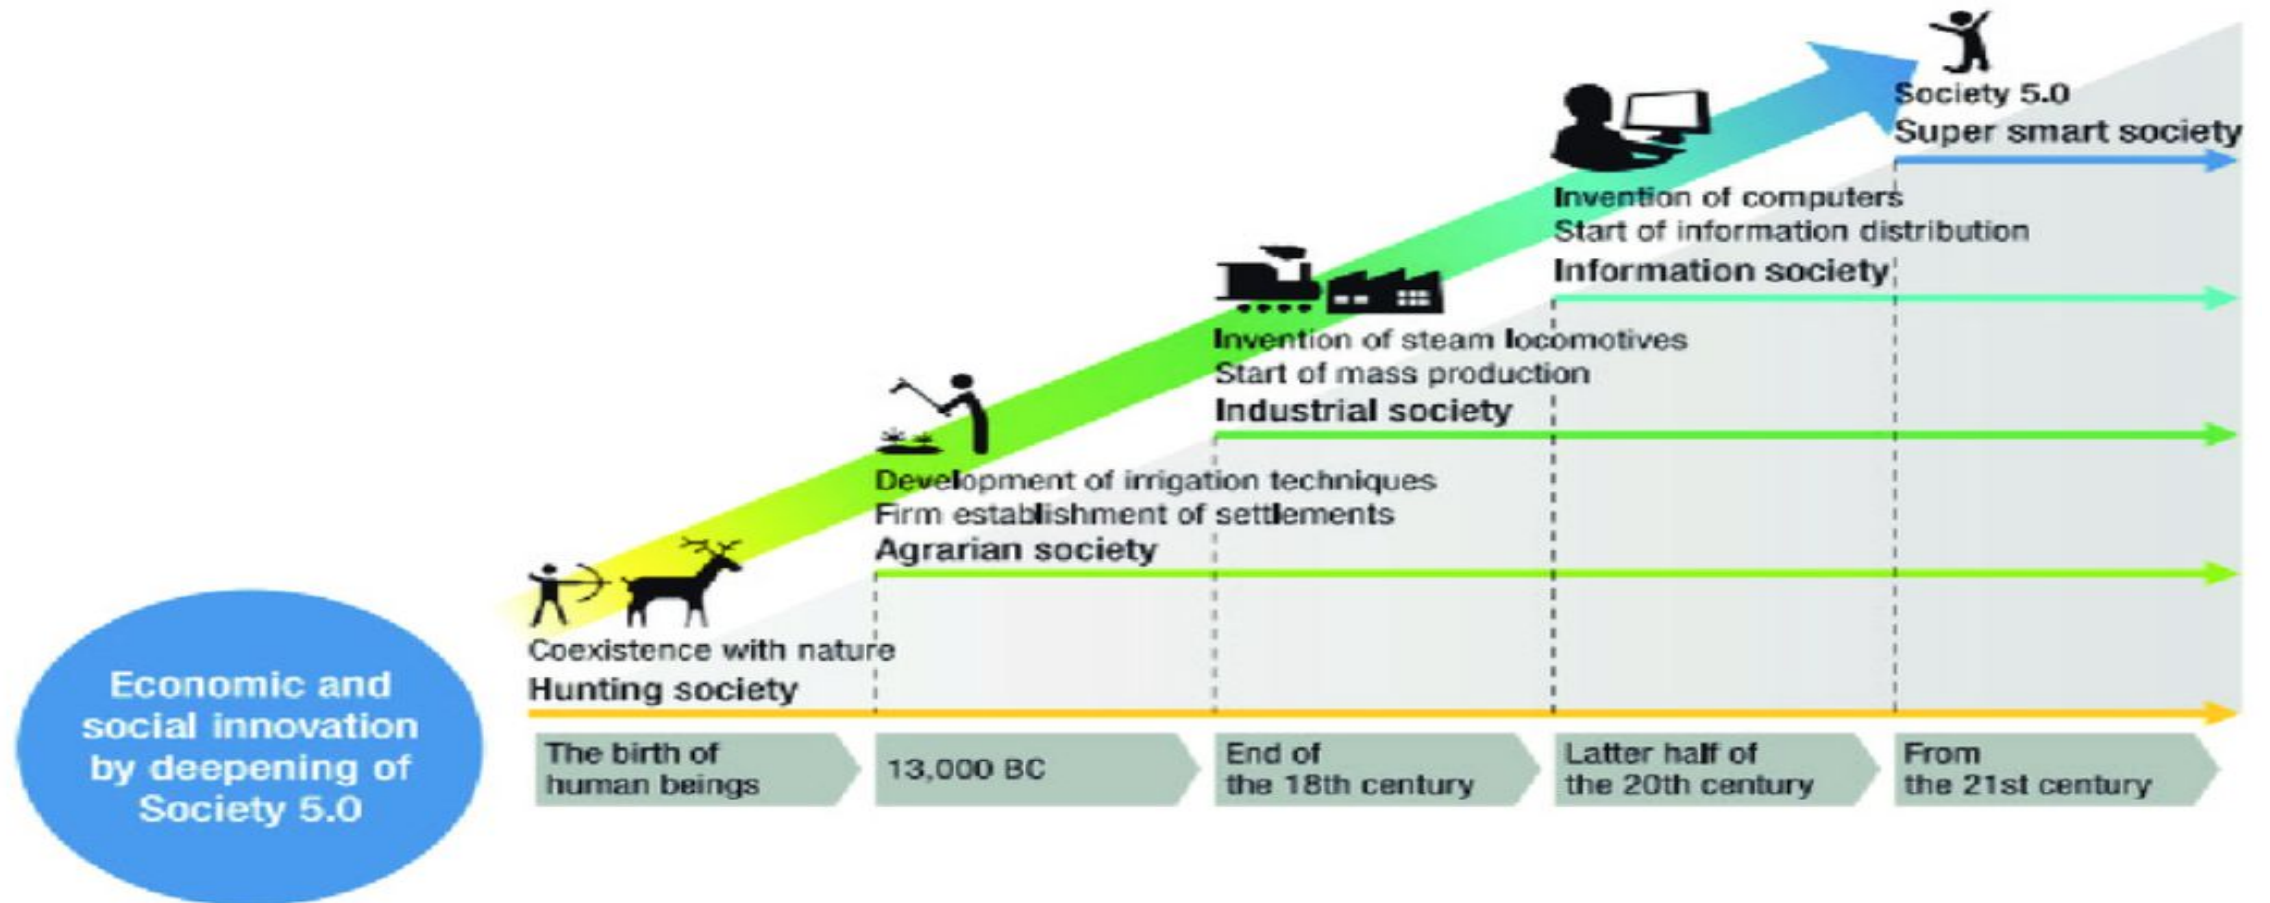

Horticultural Society

Agricultural Society

Feudal Society

Industrial Society

Evaluation of society

Society 1.0

- The period of hunter-gather societies was the longest in history
- lasted more than 200,000 years
- These ancestors lived in relatively small groups of 30 to 100 people
- The toolbox of these societies was quite simple. Many groups used lethal light weapons, spears, bows, arrows, and simple chopping tools to carve carcasses and craft knives.
- These societies did not have land ownership or political organizations.
- The division of labor depended on age and gender. Men hunted large animals, while women were generally interested in collecting plants.
- They were simple social systems usually shaped by family ties

Society 2.0: Agricultural society

- started between 10,000 and 15,000 years ago with the increased population density and limitations in the hunter-gatherer lifestyle
- They began to produce manufacturing tools and household appliances. Some people store their excess products
- Farming led to the establishment of permanent or semi-permanent villages, resulting in higher human density.
- Due to the fixed villages, conflict with other agricultural groups and nomads also increased.
- Agricultural society was relatively developed compared to wild hunter-gatherer societies.
- Urbanization led to economic, political, and religious institutionalization.
- Labor specialization emerged and set the stage for industrial society.

Society 3.0: Industrial society

- Transition from agriculture and the handicraft economy to an economy dominated by industry and machine manufacturing.
- This process began in England in the 18th century and spread worldwide.
- production turned into mass production, and land workers shifted in factories.
- With the change in work style, the social structure also changed
- Manual and animal labor was replaced by external energy sources such as fossil fuels to increase production.
- Free competition market and profit maximization
- The creation of a class society (capitalist-worker) led to class conflict and widespread unemployment

Society 4.0: The knowledge society

- This society values human capital as the primary input of production and innovation. A knowledge society is tightly linked to the formal economy through modern information and communication technologies and has easy access to relevant and usable information.
- members of the information society carry out their economic, social, and political activities with the information they obtain and present through the online network.
- Therefore, information societies measure well-being by the information they produce and use rather than natural resources.

Society 5.0: “Super-Smart Society”

- According to Fukuda (2020), Society 5.0 aims to create a human-centered society in which products and services can be easily provided to reduce economic and social distances and meet all people’s various potential needs for a comfortable and vigorous life.
- the inextricable link between technology and society.
- Society 5.0 was adopted in 2016 as one of the core tenets of the Japanese government’s strategy, and gradually their goals are becoming a reality.
- the social economy aims to employ many people who cannot find jobs in other parts of the economy because they do not have the necessary skills or have special needs.
- However, social economic health, social work, education, etc., also includes a large number of non-routine tasks that are difficult to replace with ICT in fields. Moreover, new information and communication technologies can provide unique and more efficient tools to organize the social economy.

Relation between society and culture

CULTURE

Culture refers to the shared beliefs, values, customs, traditions, and behaviors that characterize a particular group or society. It encompasses the collective knowledge, practices, and expressions that shape and guide the way people think, interact, and live within a given social context.

SOCIETY

Society refers to a group of individuals who share a common territory, interact with one another, and are bound by social relationships and institutions. It encompasses the collective organization, structure, and functioning of a community or population, including its norms, values, and patterns of behavior.

Community and society

SOCIETY	COMMUNITY
A definite geographic area is not an essential aspect of society.	A Community always denoted a definite locality or geographic area.
Society is a broader concept and abstract in nature.	Community is narrower concept and concrete in nature.
Society refers to a system (or web) of social relationships .	Community refers to a group of people who live in a definite locality.
Society is based on both similarities as well as differences.	Community is based on only similarities among its members.
A society may or may not have community sentiment.	Without a community sentiment a community can't be constituted.
A society is more concerned with organization	A community is concerned with life from which organization develops.
The objectives and interests of society are more extensive and varied.	The objectives and interests of a community are comparatively less extensive and varied.
